CS5541 – Computer Systems
Caches Again

The following table gives the parameters for a number of different caches, where **m** is the number of physical address bits, **C** is the cache size (number of data bytes), **B** is the block size in bytes, and **E** is the number of lines per set. For each cache, determine the number of cache sets (**S**), tag bits (**t**), set index bits (**s**), and block offset bits (**b**).

Cache	m	C	B	E	S	t	s	b
1	32	1024	4	4				
2	32	1024	4	256				
3	32	1024	8	1				
4	32	1024	8	128				
5	32	1024	32	1				
6	32	1024	32	4
